

AMENDMENTS TO THE ABSTRACT

Please add the following paragraph as the abstract in the currently filed specification:

A rear vision device for a motor vehicle includes a video camera intended to be integrated fixedly at a rear of a motor vehicle, a flap mounted so as to be able to move between a closed position and an open position, in which the said flap is disposed respectively in front of and away from the a lens of the video camera, and drive means able to drive the flap in movement between the closed position and the open position. The flap includes pivoting means defining a pivot axis and allowing passage from one position to another. The flap also includes a curved part and articulation arms. The articulation arms are fixed to the curved part and the pivoting means.
